TPU base absorbs external impacts effectively,
minimizing the risk of windshield breakage.

UV Protection

Blocks up to 99% of harmful UV rays,
protecting both your windshield and your driving comfort.

Clear View

Maintains superior optical clarity with zero haze,
guaranteeing clear visibility in all driving conditions.

Everyday Care DYNO Finish

· 300 mL / 10 fl. oz.

DYNO Finish is a simple spray-on ceramic coating that keeps your car looking fresh every day.

just spray and wipe to boost your finish, repel water, and protect every surface — paint, trim, glass, and PPF.

Ceramic coating spray

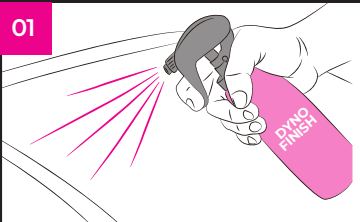

It's a spray-type coating containing real ceramic coating ingredients.

High durability

The ceramic components form a high-durability coating layer.

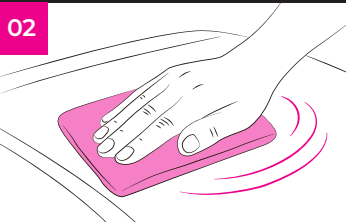

01

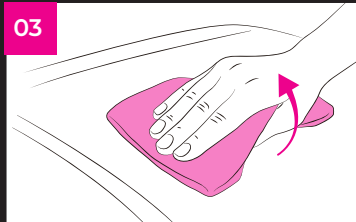

For a mid-size panel (like a hood), spray 2 to 3 times across the surface.

02

Using the microfiber towel, spread the product evenly with light, overlapping motions.

03

Flip the towel and gently buff off any remaining residue.

Professional Care Shine Solutions

Professional treatments available at STEK shops.

Choose Final Coat Ceramic Coating for enhanced gloss and protection, or the Compound Kit for a deeper refresh after years of driving.

PPF COMPOUND KIT

PPF Compound Cut / PPF Compound Polish / Restoration Coating / Wool Pad / Foam Pad / Coating Applicator

FINAL COAT

From simple daily care to professional refresh, STEK Car Care keeps your PPF in perfect condition.

DYNO

Common Questions

Q: Is PPF really necessary?

Yes. PPF protects your car's paint from everyday scratches and damage. It's especially recommended for new or luxury vehicles to keep their finish looking new for longer. DYNO PPF is also eco-conscious, minimizing harmful chemicals for a more sustainable choice.

Q: How long does the shine and water repellency last?

Premium PPF provides long-lasting gloss and hydrophobic performance. In normal conditions, water repellency lasts over 6 months, and the shine endures for the film's lifetime. With DYNO Finish care spray, you can extend water repellency and shine continually.

Q: Is maintenance after installation difficult?

Not at all. Regular car washes are enough to keep your car looking great. For best results, we recommend using DYNO Finish during washes to keep the film in top condition.

Q: Can it protect against scratches and stone chips?

Yes. PPF effectively defends against daily scratches, door dings, and stone chips. It also features a self-healing function that restores minor scratches with heat from sunshine or hot water.

Q: Will removing PPF damage my car's paint?

No. When removed properly by a professional, your paint remains safe. However, extra care may be needed for repainted or already weakened surfaces.

Q: How long does PPF last?

On average, PPF lasts more than 5 years, and with proper care it can even protect your car for up to 10 years or more. Durability may vary depending on product choice, driving, and maintenance conditions.

Q: How can I check the warranty?

DYNO PPF includes warranty support. Your installer will register your warranty at the time of installation, and you can easily check it anytime through the STEKSHIELD website.

Q: How can I keep my PPF looking new every day?

DYNO Finish is a simple spray-on ceramic coating you can use at home. Just spray and wipe to boost the finish, repel water, and protect your PPF and paint.

Q: How can I refresh my PPF after years of driving?

Visit an authorized STEK shop for STEK Shine Solution. Our exclusive compounds safely restore gloss and clarity without damaging the film — restoring your PPF to top condition.
